

Corten Stairs

We can produce Corten Steel Stairs for self-assembly by you, made in 3 mm thick Corten steel. Thanks to the modular construction, the product can be adapted to your needs. The width of individual steps can be 1000, 2000 or 3000mm, Each Step has a tread depth of 240mm and riser height of 170mm. Depending on the number of steps, you can get the desired height of the stairs, but the maximum height is 10 steps. Stairs are made to order, so they are not available in stock. The lead time is 6-8 weeks.

Important!

1. Corten steel products are delivered raw, not oxidized. At your request, we can accelerate the aging process of the Corten, but this is an additional paid service. There is also the possibility of independent "aging" according to the instructions attached to the product.
2. All Fixings included.

WARNING!

Stair assembly should be started by securing the lower step to the diagonal U-shaped brace sections first and then working up the stairs.
